

# The Sustainables lead engineer

The Sustainables make sustainability easy

## Job description

---

As our Lead Software Engineer you will build and own our complex core APIs, improve our Azure cloud infrastructure, design and develop new services and applications, research and apply new technologies and engineering practices, coach your fellow colleagues.

You will get a lot of freedom and responsibility in your daily work and you will (together with your team) fully own the APIs you develop. "You build it, you run it".

## About The Sustainables

We make it easy for homeowners to transform their homes into energy efficient buildings by providing high-tech and scalable tools to our business partners.

Recent project front-ends:

- <https://homeqgo.nl> "White label" sustainability advice and shop
- <https://plusjehuis.essent.nl> sustainability advice and shop

The projects mentioned above are publicly available tools that make use of an extensive back-end which we are happy to introduce to you in a personal talk (trust us, it is complex and challenging)

## What we offer

- A lot of professional growth opportunities and we really mean it :)
- High pace, short development cycles
- Flexibility in the use of tooling and techniques
- Simple and stable development process
- Opportunity to work on different kind of products and projects to polish your skills
- Flexible working hours, or partially working from home

## Some extra perks (when we get back to office)

- Remote-first team setup (we use slack/google meet/etc in all daily work, your Amsterdam-based colleagues often work from home, all our company meetings are remote-oriented)

- Healthy team lunch every day
- Conferences/training budget
- Lots of team events (including going abroad together)
- Friday kickboxing :)

## Your profile

### Essential skills

- Strong software engineering and architecture skills, and a desire to keep learning and coach your colleagues
- Experience with shipping high-quality products (including design, development, release and monitoring phases)
- .NET stack - we use .NET Core and .NET 4.7, ASP.NET Core and ASP.NET MVC as our web frameworks, EF and EF Core
- Experience with relational databases - we use SQL Server (and sometimes MongoDB and Redis)

### Nice to have (but not necessary)

- Azure knowledge since we use it extensively (or any other public cloud provider)
- Front end development experience (or a desire to gain it) - any modern frameworks like angular, react, vue (we use vue.js)

## Applying

Please send your motivation and resume to [nikita@thesustainables.nl](mailto:nikita@thesustainables.nl).

Agencies should not respond to this vacancy. Really.
