

The Sustainable Product Owner

The Sustainable make sustainability easy

Job description

You are looking at a PO vacancy, so we will not bother you too much with a description of a PO role. We rather get into the specifics of working at The Sustainable and the type of person we are looking for.

About The Sustainable

At the Sustainable we make it easy for homeowners to transform their homes into energy efficient buildings by providing high-tech and scalable tools to our business partners.

Team

Our teams usually consist of two to four developers and one QA who are 50 - 100% related to a particular project, a visual designer and an energy modeling expert who are working on multiple projects backed up by as many internal and external consultants as needed.

We have a distributed (development) team with people working in The Netherlands, Spain and The Philippines. Being a distributed team, most internal communication is in English.

Work

You will be mostly be involved in Project work. From advising our customers and creating quotes to consulting and solution design to managing the team's backlog and reporting. Like most people on the team, our POs usually work on multiple projects at the same time.

Being a relatively small company means that we divide general tasks amongst each other, which will also hold for you. You will be spending time on general company things, from writing a new vacancy text to being involved with inventing the next TS innovations.

Your customers

As a commercial PO you will be working mostly with external customers. These currently are utilities (like [Essent](#) and [Engie](#), Greenchoice), Original Equipment manufacturers (like Nefit, Jaga) and other companies that benefit from providing sustainable energy advice (like BijBouwe).

The links mentioned above direct to the customer UIs of these projects. These publicly available tools are making use of an extensive back-end which we are happy to introduce to you in a personal talk.

Company benefits

- Awesome colleagues and great development culture
- Bleeding edge technologies
- Very spacious office
- Boxing every Friday
- Team Lunch every day
- Colleagues always in for (water)sports
- Regular team events (skiing trip, LAN parties, innovation sessions ..)

Our tech stack

Cloud-based solutions hosted in Azure, developed using the latest Microsoft (.NET Core) and other open source technologies (Vue).

Essential skills

- Fluent in English
- Fluent in Dutch
- Minimum of 4 years experience as a member of a scrum development team
- Experience in consulting
- Strong analytical skills
- Affinity with sustainability
- Ability to independently run a project
- Strong track record/experience building great consumer-facing products
- People skills: confidence in communicating with external customers on different levels
- Experience with managing external customer relationships
- Experience managing larger commercial projects
